

Dried with Natural Ingredients Health Products...

*Our company, which aims to bring high quality products
to our customers, has organic agriculture and
food safety certificates.*

About Us

Since 2000, we have been developing our organic production potential by including the fields of our contracted producers in our own lands and continue our work.

All departments in our facility are designed according to food safety standards; With 111,600 hectares of land and 150,000 apricot trees, production is carried out by a professional team in a 6000 m2 covered area and under hygienic conditions.

Our company, which aims to bring high quality products to our customers, has all the necessary certificates regarding organic agriculture.

We preserve our products with our drying tunnels, washing and packaging departments, freezing rooms and cold storage.

We have an annual processing capacity of 2,500 tons of organic and 13,000 tons of apricot. We make all kinds of packaging with the latest technology machines between 150 gr and 12.7 kg.

%100 Natural

And Unique Fruits Dried Carefully

We turn the best quality raw fruits, which are processed in a hygienic facility in accordance with the legislation, into natural and healthy products by drying them at high standards.

Sun Dried Apricot

Sun Dried Apricot

Sun Dried Apricot, one of the dried apricot varieties, is obtained by picking the apricot after the harvesting stage and drying in the sun. The fact that the amount of water in its content is higher than other dried apricots is one of those that create this variety. Long-term preservation trail dried in the sun, day-dry, without any additives and without any exposure.

As with all other organic products that our company owns, it has taken these 100% organic products away from chemical, soluble and inorganic substances such as fertilizers, growth regulators and hormones, to protect the health of the consumer, which is aimed by organic production, at the tables of our valuable consumers.

:5

Soft (Moisturized) Apricot

Apricot can be consumed both wet and dry. It does not contain any additives from the growing stage to the drying stage. In this respect, the organic apricot is separated from its seeds, washed and dried in the sun to keep it long-lasting without any processing and without losing any of its natural ingredients.

We do the packing process. In this form of the product, we obtain an easier and softer flavor to be eaten. We prevent all risks that may occur in the product with only hot water application.

Thus, we do not apply any harmful substances until our products are grown until they reach you.

Dried Plums & Soft (Moisturized) Plum

Prunes are harvested after they are grown and matured completely naturally. In order to preserve the nutrients and high fiber content of prunes for a longer period of time, the product is washed by separating from its core, dried in the sun and made ready for consumption. In this form of the product, we obtain an easier and softer flavor to be eaten.

We prevent all risks that may occur in the product with only hot water application.

Thus, we do not apply any substance harmful to health from the cultivation of our products until they reach you.
